

Science Term: Electricity

Our Learning Journey:

1. Identify and classify electrical household appliance

2. Construct a simple electrical circuit.

3. Identify whether a circuit is a complete loop.

5. Investigate the difference between a conductor and an insulator.

4. Create and investigate the use of switches in a circuit.

Our Outcome:

Student will be learning all about electricity. First, identifying and classifying various household electrical appliances before experimenting with electrical circuits. Students will develop an understanding of how electrical circuits work and what materials make good conductors and insulators.

Vocabulary:

Electricity	Mains
Battery cell	Current
Insulator	Conductor
